- Why OP's EM strategy

The power of value investing

Value stocks outperform growth stocks over the long-run, however the past decade has been difficult

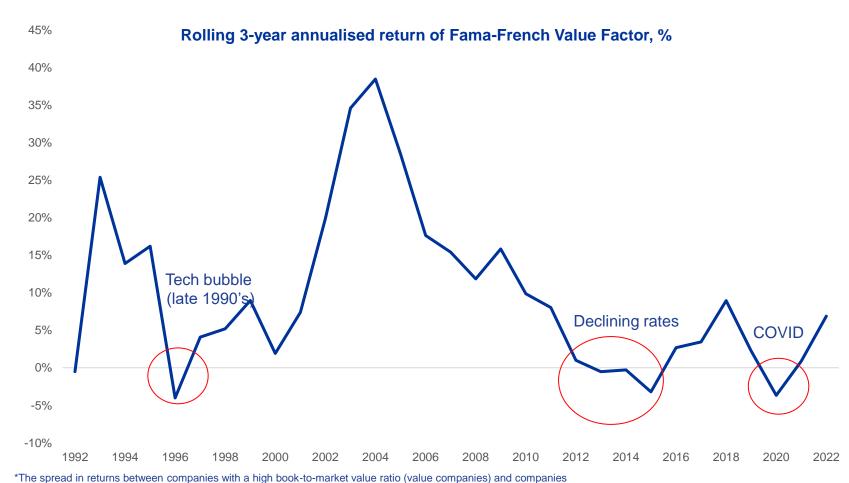

*The spread in returns between companies with a high book-to-market value ratio (value companies) and companies with a low book-to-market value ratio.

Historical performance of value in EM

Studies have shown that value investing works well when applied consistently to EM strategies

with a low book-to-market value ratio.

Inception of composite 1st January 2001.

NDR = Net Dividends Reinvested.

*Part of the composite AUM may include currency-hedged assets.

On 1st October 2023, the Doddington Emerging Markets Equity Fund was deemed eligible to enter the Emerging Markets composite. As a result of this, the number of portfolios in Emerging Markets Composite has gone up to three and the total composite assets increased.

The value of all investments and the income from them can go down as well as up; this may be due, in part, to exchange rate fluctuations. Past performance is not necessarily a guide to future performance.

Compliance statement

Oldfield Partners LLP claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Oldfield Partners LLP has been independently verified for the periods 1st January 2001 to 31st December 2023. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Definition of the firm

Oldfield Partners LLP is an independent investment management firm established in December 2004, authorised by the FCA in January 2005, and beginning operations in March 2005. For the purposes of compliance with GIPS, the firm is defined as all assets managed by Oldfield Partners LLP. The firm also includes assets that were previously managed by Alta Advisers Ltd and were subsequently transferred to Oldfield Partners LLP. The historical performance record from Alta Advisers Ltd is linked to the performance of Oldfield Partners LLP.

List of composites

A complete list of composite descriptions, pooled fund descriptions for limited distribution pooled funds, and a list of broad distribution pooled funds is available on request.

Composite description

The Emerging Markets Equity Composite includes global emerging markets equity portfolios run with the following style: value focussed, concentrated, index ignorant and anti-short term. The benchmark for this composite is MSCI Emerging Markets Net Dividends Reinvested.

Composite creation date

The composite was created in June 2008, the date when the emerging markets assets transferred to Oldfield Partners.

Ex-post standard deviation

The three year annualised standard deviation measures the variability of the composite and the benchmark returns over the preceding 36 months. Standard deviation measures are not required for periods prior to 2011.

Fees

Gross of fees performance is calculated gross of investment management fees and as a rule net of custodial and administrative fees. Net of fees performance is presented net of actual investment management fees. Investment advisory fees are described in Oldfield Partners LLP's Form ADV Part 2A.

Fee schedule

The highest investment management fee schedule for Emerging Markets Equity segregated accounts is 0.90%. The highest investment management fee schedule for the Overstone Emerging Markets Equity Fund, which is included in the Emerging Markets Equity Composite, is 1.25% on all assets. The total expense ratio as of 31 December 2023 for the Overstone Emerging Markets Equity Fund was 1.60%.

Historic Net/Gross returns

Net and gross returns are the same from 2001 to June 2008 as the investment management fees charged on the portfolios during this period were so low as to have an insignificant impact on performance and the decision was taken not to gross up the net returns.

Currency of results

The results are presented in US Dollar terms.

Exchange rates

Sources of exchange rates and share prices may differ between the benchmark and the individual portfolios contained within the composite.

Composite dispersion

Composite dispersion is only calculated if there are more than five accounts included in the composite for the full year. Dispersion is calculated as the highest return achieved for an account included in the composite minus the lowest return achieved for an account included in the composite. The calculation uses the gross of fees annual returns.

Leverage/Derivatives

The portfolios contained in this composite do not use leverage or derivatives.

Withholding and capital gains taxes

Performance is calculated net of all non-recoverable withholding taxes and where applicable, net of capital gains taxes.

Minimum asset level

As of 1st May 2023, a minimum of US\$10m assets under management is required for a composite to be created and GIPS slide to be updated quarterly.

Additional information

Policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request. For the month of January 2001 only, the Emerging Markets Equity Composite includes the emerging markets segment from a larger portfolio. Cash is allocated to the carve-out segment return on a pro-rata basis depending on the proportion of emerging markets assets to the total portfolio based on the beginning of period market value.

This document contains performance information meeting GIPS standards which use a composite of investment advisory fees paid by clients rather than the actual fees which will apply to a particular investment. GIPS standards are calculated differently to SEC standards and, accordingly, where this document is provided as a non-exempt investment advertisement it is not intended for US persons and any US person seeking performance information calculated to SEC rules should contact info@oldfieldpartners.com. Oldfield Partners LLP's investment advisory fees are more fully described in the Form ADV Part 2.

What we believe

"Successful investing is about managing risk, not avoiding it" - Benjamin Graham

- **Independent:** Objectively weigh information to arrive at an independent investment conclusion. Exercise investment common sense
- Longer term: Maintain a patient temperament and long-term investment horizon, as evidenced by a low holding turnover
- **Concentrated:** A concentrated portfolio of 15-25 holdings, diversified across countries, sectors and all cap in nature. A concentrated portfolio concentrates the mind
- **Index insensitive:** We are not compelled to invest in areas we find unattractive or lacking basic governance controls. Our country and sector weights are a residual of our bottom up stock selection
- Valuation: We are only interested in stocks with attractive valuations. We are value investors

Invest in businesses we can understand, within industries that are attractive, and with compelling valuations

The value of all investments and the income from them can go down as well as up; this may be due, in part, to exchange rate fluctuations. Past performance is not necessarily a guide to future performance.

In particular this document is not intended for distribution in the United States or for the account of U.S. persons (as defined in Regulation S under the United States Securities Act of 1933, as amended (the "Securities Act")) except to persons who are "qualified purchasers" (as defined in the United States Investment Company Act of 1940, as amended (the "Companies Act")) and "accredited investors" (as defined in Rule 501(a) under the Securities Act).

Nothing in these materials should be construed as a recommendation to invest in OP's products or as legal, regulatory, tax, accounting, investment or other advice. Potential investors should seek their own independent financial advice. The information contained in this document is strictly confidential and is intended only for use of the person to whom OP has provided the material. No part of this report may be divulged to any other person, distributed, and/or reproduced without the prior written permission of OP.

The following is a brief summary of only some of the risk factors which may apply to an investment in a product or a segregated account managed by OP (collectively an "Account"): An investment in an Account carries with it a significant degree of risk. The value of an Account may fall as well as rise and investors may not get back the amount originally invested. Accordingly, an investment in an Account should only be made by persons who are able to bear the risk of loss of all the capital invested. Investment Risk - An investment in an Account involves investment risks, including possible loss of the amount invested. The capital return and income of an Account are based on the capital appreciation and income on the investments it holds, less expenses incurred. Therefore, an Account's return may be expected to fluctuate in response to changes in such capital appreciation or income. Currency Risk - The investments held by an Account may be acquired in a wide range of currencies and this will create currency exposure. Political Risks -The value of an Account's assets may be affected by uncertainties, such as political developments, changes in government policies, taxation and currency repatriation and restrictions on foreign investment in some of the countries in which the Account may invest. Counterparty and Settlement Risks - An Account will be exposed to a credit risk on parties with whom it trades and may also bear the risk of settlement default. In addition, market practices in relation to the settlement of transactions and the custody of assets could provide increased risks. Emerging Markets - Where an Account invests in equities or securities of companies incorporated in or whose principal operations are based in emerging markets additional risks may be encountered. These include: (a) Currency Risk: the currencies in which investments are denominated may be unstable, may be subject to significant depreciation and may not be freely convertible; (b) Country Risk: the value of an Account's assets may be affected by political, legal, economic and fiscal uncertainties within the emerging markets; (c) Market Characteristics: some emerging markets are still in the early stages of their development, have less volume, are less liquid and experience greater volatility than more established markets and are not highly regulated: (d) Custody Risk: in some markets custodians are not able to offer the level of service and safe-keeping, settlement and administration of securities that are available in more developed markets; and (e) Disclosure: less complete and reliable fiscal and other information may be available to investors and accounting standards may not provide the same degree of shareholder protection as would generally apply internationally. Substantial Repurchases - If there are substantial repurchases within a limited period of time, it may be difficult for an Account to provide sufficient funds to meet such repurchases without liquidating positions prematurely at an inappropriate time or on unfavourable terms. Investment in Other Collective Investment Schemes - an Account may invest in other collective investment schemes and management fees and performance fees (if applicable) will be in addition to the Account's charges. The foregoing summary list of risk factors does not purport to be a complete enumeration or explanation of the risks involved in an investment in an Account.

Oldfield Partners LLP, 11 Grosvenor Place, London SW1X 7HH, United Kingdom, Partnership No. OC309959.
